

ABSTRACT OF THE DISCLOSURE

An apparatus and method for delivering an electronic document, comprising of a sending device, which functions to send an electronic document, and at least one receiving device, which functions to receive the electronic document from the sending device. A network between said sending device and said at least one receiving device functions to allow said sending device to send a notification to said receiving device. The receiving device sends a notification to said sending device whereby said sending device forwards the electronic document to said receiving device. In the preferred mode, the sending device automatically records all notifications sent to and received from said receiving device, and the receiving device automatically records all notifications sent to and received from said sending device.
